

Potential euro savings from substituting away from the top-omega supplier (EUA 2017)

Savings = $\rho \times \text{EUA} \times (\omega_{\text{top}} - \omega_{\text{bot}}) \times (\text{cell spend} / \text{buyer total cost})$.

EUA = 5.76 EUR/tCO₂ (2017 annual mean, pre-MSR price). ECDF across (buyer, NACE4d) cells, version = treat_2017.
